Tropical Weather Awareness

A tropical wave is forecast to move off the west coast of Africa on Friday. Some development of this system is anticipated after that time, and a tropical depression could form over the weekend or early next week while the wave moves westward or west-northwestward over the far eastern tropical Atlantic Ocean. Interests in the Cabo Verde Islands should monitor the progress of this system during the next several days. * Formation chance through 48 hours...low...10 percent. * Formation chance through 5 days...medium...50 percent.

Scattered to numerous showers and a few thunderstorms will affect West Central Texas again today. A tropical airmass remains over the area and will contribute to torrential downpours and the potential for localized flooding. Temperatures will be below normal again today, with afternoon highs in the upper 70s and lower 80s.

A series of disturbances will combine with a moist tropical airmass over South Central Texas to generate scattered showers and thunderstorms today. Isolated areas of heavy rains are possible and may lead to flooding, especially in those areas that have had significant rainfall recently. The heaviest rains will be across the Hill Country and Edwards Plateau. Wind gusts up to 40 mph are possible with the stronger storms. Below normal temperatures are expected.
